## General aim:

Study certain smooth admissible representations of  $GL_n(F_v)$  over  $\mathbb{F}$  associated to automorphic (for  $G$ ) mod  $p$  Galois representations.

# Certain smooth admissible representations of $GL_n(F_v)$

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$
- $U^v$  = compact open subgroup of  $G(\mathbb{A}_{F^+}^{\infty, v})$

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$
- $U^v$  = compact open subgroup of  $G(\mathbb{A}_{F^+}^{\infty, v})$
- $\bar{r} : \text{Gal}(\bar{F}/F) \rightarrow GL_n(\mathbb{F})$  continuous, absolutely irreducible.

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$
- $U^v$  = compact open subgroup of  $G(\mathbb{A}_{F^+}^{\infty, v})$
- $\bar{r} : \text{Gal}(\bar{F}/F) \rightarrow GL_n(\mathbb{F})$  continuous, absolutely irreducible.

We define:

$$\begin{aligned} S(U^v, \mathbb{F}) &:= \{f : G(F^+) \backslash G(\mathbb{A}_{F^+}^{\infty, v}) / U^v \longrightarrow \mathbb{F}, \text{ loc. cst.}\} \\ S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}] &:= \text{Hecke eigenspace associated to } \bar{r}. \end{aligned}$$

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$
- $U^v$  = compact open subgroup of  $G(\mathbb{A}_{F^+}^{\infty, v})$
- $\bar{r} : \text{Gal}(\bar{F}/F) \rightarrow GL_n(\mathbb{F})$  continuous, absolutely irreducible.

We define:

$$\begin{aligned} S(U^v, \mathbb{F}) &:= \{f : G(F^+) \backslash G(\mathbb{A}_{F^+}^{\infty, v})/U^v \longrightarrow \mathbb{F}, \text{ loc. cst.}\} \\ S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}] &:= \text{Hecke eigenspace associated to } \bar{r}. \end{aligned}$$

$G(F_v^+)$  acts on  $S(U^v, \mathbb{F})$  by right translation:  $(g_v f)(g) := f(gg_v)$ ,  
preserves  $S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  = smooth admissible repres. of  $G(F_v^+)$ .

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$
- $U^v$  = compact open subgroup of  $G(\mathbb{A}_{F^+}^{\infty, v})$
- $\bar{r} : \text{Gal}(\bar{F}/F) \rightarrow GL_n(\mathbb{F})$  continuous, absolutely irreducible.

We define:

$$\begin{aligned} S(U^v, \mathbb{F}) &:= \{f : G(F^+) \backslash G(\mathbb{A}_{F^+}^{\infty, v})/U^v \longrightarrow \mathbb{F}, \text{ loc. cst.}\} \\ S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}] &:= \text{Hecke eigenspace associated to } \bar{r}. \end{aligned}$$

$G(F_v^+)$  acts on  $S(U^v, \mathbb{F})$  by right translation:  $(g_v f)(g) := f(gg_v)$ ,  
preserves  $S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  = smooth admissible repres. of  $G(F_v^+)$ .

We want to relate  $S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  (assumed  $\neq 0$ ) to  $\bar{r}_v := \bar{r}|_{\text{Gal}(\bar{F}_v/F_v)}$ .

# Certain smooth admissible representations of $GL_n(F_v)$

Let:

- $\mathbb{A}_{F^+}^{\infty, v}$  = finite adèles of  $F^+$  outside  $v$
- $U^v$  = compact open subgroup of  $G(\mathbb{A}_{F^+}^{\infty, v})$
- $\bar{r} : \text{Gal}(\bar{F}/F) \rightarrow GL_n(\mathbb{F})$  continuous, absolutely irreducible.

We define:

$$\begin{aligned} S(U^v, \mathbb{F}) &:= \{f : G(F^+) \backslash G(\mathbb{A}_{F^+}^{\infty, v})/U^v \longrightarrow \mathbb{F}, \text{ loc. cst.}\} \\ S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}] &:= \text{Hecke eigenspace associated to } \bar{r}. \end{aligned}$$

$G(F_v^+)$  acts on  $S(U^v, \mathbb{F})$  by right translation:  $(g_v f)(g) := f(gg_v)$ , preserves  $S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  = smooth admissible repres. of  $G(F_v^+)$ .

We want to relate  $S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  (assumed  $\neq 0$ ) to  $\bar{r}_v := \bar{r}|_{\text{Gal}(\bar{F}_v/F_v)}$ .

## Remark

$S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}] \neq 0 \Rightarrow \bar{r}(c \cdot c) \cong \bar{r}(\cdot)^v \otimes \omega^{1-n}$  where  $\langle c \rangle = \text{Gal}(F/F^+)$ .

# Quick review of the $GL_2(\mathbb{Q}_p)$ -case

# Quick review of the $GL_2(\mathbb{Q}_p)$ -case

Colmez: there is a contravariant exact functor:

$\{\text{finite length repr. of } GL_2(\mathbb{Q}_p) \text{ over } \mathbb{F}\} \rightarrow \{\text{étale } (\varphi, \Gamma)\text{-modules}\}.$

# Quick review of the $GL_2(\mathbb{Q}_p)$ -case

Colmez: there is a contravariant exact functor:

$\{\text{finite length repr. of } GL_2(\mathbb{Q}_p) \text{ over } \mathbb{F}\} \rightarrow \{\text{étale } (\varphi, \Gamma)\text{-modules}\}.$

Fontaine: there is a (contravariant) equivalence of categories:

$\{\text{étale } (\varphi, \Gamma)\text{-modules}\} \cong \{\text{fin. diml. repr. of } \text{Gal}(\overline{\mathbb{Q}_p}/\mathbb{Q}_p) \text{ over } \mathbb{F}\}.$

# Quick review of the $GL_2(\mathbb{Q}_p)$ -case

Colmez: there is a contravariant exact functor:

$\{\text{finite length repr. of } GL_2(\mathbb{Q}_p) \text{ over } \mathbb{F}\} \rightarrow \{\text{étale } (\varphi, \Gamma)\text{-modules}\}.$

Fontaine: there is a (contravariant) equivalence of categories:

$\{\text{étale } (\varphi, \Gamma)\text{-modules}\} \cong \{\text{fin. diml. repr. of } \text{Gal}(\overline{\mathbb{Q}_p}/\mathbb{Q}_p) \text{ over } \mathbb{F}\}.$

$V :=$  (covariant) composition of the two functors.

# Quick review of the $GL_2(\mathbb{Q}_p)$ -case

Colmez: there is a contravariant exact functor:

$$\{\text{finite length repr. of } GL_2(\mathbb{Q}_p) \text{ over } \mathbb{F}\} \rightarrow \{\text{étale } (\varphi, \Gamma)\text{-modules}\}.$$

Fontaine: there is a (contravariant) equivalence of categories:

$$\{\text{étale } (\varphi, \Gamma)\text{-modules}\} \cong \{\text{fin. diml. repr. of } \text{Gal}(\overline{\mathbb{Q}_p}/\mathbb{Q}_p) \text{ over } \mathbb{F}\}.$$

$V :=$  (covariant) composition of the two functors.

## Theorem 1 (Colmez + Emerton + Chojecki-Sorensen)

Assume  $p > 3$ ,  $n = 2$ ,  $p$  splits completely in  $F$ . Assume:

- weak technical assumptions on  $\bar{r}$  and  $U^\vee$
- $\bar{r}_w$  absolutely irreducible for all  $w|p$ .

Then there is  $d \geq 1$  such that  $V(S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]) \cong \bar{r}_v^{\oplus d} \otimes \omega^*$ .

# Quick review of the $GL_2(\mathbb{Q}_p)$ -case

Colmez: there is a contravariant exact functor:

$$\{\text{finite length repr. of } GL_2(\mathbb{Q}_p) \text{ over } \mathbb{F}\} \rightarrow \{\text{étale } (\varphi, \Gamma)\text{-modules}\}.$$

Fontaine: there is a (contravariant) equivalence of categories:

$$\{\text{étale } (\varphi, \Gamma)\text{-modules}\} \cong \{\text{fin. diml. repr. of } \text{Gal}(\overline{\mathbb{Q}_p}/\mathbb{Q}_p) \text{ over } \mathbb{F}\}.$$

$V :=$  (covariant) composition of the two functors.

## Theorem 1 (Colmez + Emerton + Chojecki-Sorensen)

Assume  $p > 3$ ,  $n = 2$ ,  $p$  splits completely in  $F$ . Assume:

- weak technical assumptions on  $\bar{r}$  and  $U^\vee$
- $\bar{r}_w$  absolutely irreducible for all  $w|p$ .

Then there is  $d \geq 1$  such that  $V(S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]) \cong \bar{r}_v^{\oplus d} \otimes \omega^*$ .

Should hold as soon as  $n = 2$ ,  $F_v = \mathbb{Q}_p$ . For  $H^1$  of modular curves, no need to assume  $\bar{r}_w$  irreducible (Colmez + Emerton).

- $\xi(z) := \text{diag}(z^{n-1}, z^{n-2}, \dots, 1) \in GL_n(F_v), z \in \mathcal{O}_{F_v} \setminus \{0\}$
- $\mathbb{F}[[X]][F] =$  non commutative ring defined by  $FX^i = X^i p F$ .

Then  $\mathbb{F}[[N_0/N_1]] \xrightarrow{\sim} \mathbb{F}[[\mathbb{Z}_p]] \cong \mathbb{F}[[X]]$  naturally acts on  $\pi^{N_1}$ .

Extend it to an action of  $\mathbb{F}[[X]][F]$  via:

$$F(v) := \sum_{n_1 \in N_1 / \xi(p) N_1 \xi(p)^{-1}} n_1 \xi(p) v, \quad v \in \pi^{N_1}.$$

Finally, let  $\mathbb{Z}_p^\times$  act on  $\pi^{N_1}$  via  $z \cdot v := \xi(z)v, z \in \mathbb{Z}_p^\times$ .

# A simple generalization of Colmez's functor

For any  $\mathbb{F}$ -vector space  $W$  recall  $W^\vee = \mathbb{F}$ -linear dual of  $W$ .

# A simple generalization of Colmez's functor

For any  $\mathbb{F}$ -vector space  $W$  recall  $W^\vee = \mathbb{F}$ -linear dual of  $W$ .

## Proposition 1 (Colmez, formulation due to Emerton)

Let  $M$  be a finite type  $\mathbb{F}[[X]][F]$ -module such that  $M$  is torsion as  $\mathbb{F}[[X]]$ -module and satisfies  $\dim_{\mathbb{F}} M[X] < \infty$ . Then  $M^\vee[1/X]$  is an étale  $\varphi$ -module over  $\mathbb{F}((X))$ .

# A simple generalization of Colmez's functor

For any  $\mathbb{F}$ -vector space  $W$  recall  $W^\vee = \mathbb{F}$ -linear dual of  $W$ .

## Proposition 1 (Colmez, formulation due to Emerton)

Let  $M$  be a finite type  $\mathbb{F}[[X]][F]$ -module such that  $M$  is torsion as  $\mathbb{F}[[X]]$ -module and satisfies  $\dim_{\mathbb{F}} M[X] < \infty$ . Then  $M^\vee[1/X]$  is an étale  $\varphi$ -module over  $\mathbb{F}((X))$ .

We apply this to  $M \subseteq \pi^{N_1}$  of finite type over  $\mathbb{F}[[X]][F]$  preserved by  $\mathbb{Z}_p^\times \cong \Gamma$  with  $\dim_{\mathbb{F}} M[X] < \infty \rightsquigarrow$  get  $M^\vee[1/X] = \text{étale } (\varphi, \Gamma)\text{-module}$ .

# A simple generalization of Colmez's functor

For any  $\mathbb{F}$ -vector space  $W$  recall  $W^\vee = \mathbb{F}$ -linear dual of  $W$ .

## Proposition 1 (Colmez, formulation due to Emerton)

Let  $M$  be a finite type  $\mathbb{F}[[X]][F]$ -module such that  $M$  is torsion as  $\mathbb{F}[[X]]$ -module and satisfies  $\dim_{\mathbb{F}} M[X] < \infty$ . Then  $M^\vee[1/X]$  is an étale  $\varphi$ -module over  $\mathbb{F}((X))$ .

We apply this to  $M \subseteq \pi^{N_1}$  of finite type over  $\mathbb{F}[[X]][F]$  preserved by  $\mathbb{Z}_p^\times \cong \Gamma$  with  $\dim_{\mathbb{F}} M[X] < \infty \rightsquigarrow$  get  $M^\vee[1/X] = \text{étale } (\varphi, \Gamma)\text{-module}$ .

Define the covariant functor  $V$  to ind-representations of  $\text{Gal}(\overline{\mathbb{Q}_p}/\mathbb{Q}_p)$ :

$$\pi \longmapsto V(\pi) := \varinjlim_M V^\vee(M^\vee[1/X])$$

where the limit is over  $\mathbb{Z}_p^\times$ -stable  $M \subseteq \pi^{N_1}$  as above ( $V^\vee(M^\vee[1/X])$  is the contravariant  $\text{Gal}(\overline{\mathbb{Q}_p}/\mathbb{Q}_p)$ -representation associated to  $M^\vee[1/X]$ ).

# Statement of the conjecture

## Statement of the conjecture

## Conjecture

There is an integer  $d \geq 1$  such that:

$$V(S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]) \cong \left( \text{Ind}_{F_v}^{\otimes \mathbb{Q}_p} \left( \bar{r}_v \otimes_{\mathbb{F}} \Lambda_{\mathbb{F}}^2 \bar{r}_v \otimes \cdots \otimes \Lambda_{\mathbb{F}}^{n-1} \bar{r}_v \right) \right)^{\oplus d} \otimes \omega^*$$

where  $\text{Ind}_{F_v}^{\otimes \mathbb{Q}_p} :=$  **tensor induction** from  $\text{Gal}(\bar{F}_v/F_v)$  to  $\text{Gal}(\bar{\mathbb{Q}}_p/\mathbb{Q}_p)$ .

## Statement of the conjecture

## Conjecture

There is an integer  $d \geq 1$  such that:

$$V(S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]) \cong \left( \text{Ind}_{F_v}^{\otimes \mathbb{Q}_p} \left( \bar{r}_v \otimes_{\mathbb{F}} \Lambda_{\mathbb{F}}^2 \bar{r}_v \otimes \cdots \otimes \Lambda_{\mathbb{F}}^{n-1} \bar{r}_v \right) \right)^{\oplus d} \otimes \omega^*$$

where  $\text{Ind}_{F_v}^{\otimes \mathbb{Q}_p} :=$  **tensor induction** from  $\text{Gal}(\bar{F}_v/F_v)$  to  $\text{Gal}(\bar{\mathbb{Q}}_p/\mathbb{Q}_p)$ .

## Remark

An étale  $(\varphi, \Gamma)$ -module  $D$  has an operator  $\psi$ . The conjecture can be restated as: if  $f : (S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]^{N_1})^\vee \rightarrow D$  is a contin.,  $\Gamma$ -equivariant,  $\mathbb{F}[[X]]$ -linear map sending  $F^\vee$  to  $\psi$ , then  $f$  uniquely factors through the  $(\varphi, \Gamma)$ -module of the above tensor induction.

## Theorem 5 (Dotto-Le + B.-H.-H.-M.-S.)

(i) There is an explicit action of  $\mathfrak{n}$  on  $D_0^{I(1)}$ , only depending on  $\bar{r}_v$ , such that there is an  $(\mathfrak{n}, KZ)$ -equivariant isomorphism:

$$(S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}])^{I(1)} \hookrightarrow S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}]^{K(1)} \cong (D_0^{I(1)} \hookrightarrow D_0)^{\oplus d}.$$

(ii) For this action of  $\mathfrak{n}$  we actually have:

$$V(M(S(U^v, \mathbb{F})[\mathfrak{m}_{\bar{r}}])) \cong (\text{Ind}_{F_v}^{\otimes \mathbb{Q}_p} \bar{r}_v)^{\oplus d}.$$

# Proof of Theorem 2: Step 2

## Proof of Theorem 2: Step 2

Let:

- $Z(1) := 1 + p\mathcal{O}_{F_v} = \text{pro-}p\text{-center}$

## Proof of Theorem 2: Step 2

Let:

- $Z(1) := 1 + p\mathcal{O}_{F_v} = \text{pro-}p\text{-center}$
- $\mathfrak{m}_I := \text{maximal ideal of Iwasawa algebra } \Lambda_I := \mathbb{F}[[I(1)/Z(1)]]$ .

## Proof of Theorem 2: Step 2

Let:

- $Z(1) := 1 + p\mathcal{O}_{F_v} = \text{pro-}p\text{-center}$
- $\mathfrak{m}_I := \text{maximal ideal of Iwasawa algebra } \Lambda_I := \mathbb{F}[[I(1)/Z(1)]]$ .

If  $\pi$  is a smooth representation of  $GL_2(F_v)$  over  $\mathbb{F}$  with a central character, then  $\pi^{I(1)} = \pi[\mathfrak{m}_I]$  and  $\pi$  is admissible if and only if  $\dim_{\mathbb{F}} \pi[\mathfrak{m}_I] < \infty$ .

## Proof of Theorem 2: Step 2

Let:

- $Z(1) := 1 + p\mathcal{O}_{F_v} = \text{pro-}p\text{-center}$
- $\mathfrak{m}_I := \text{maximal ideal of Iwasawa algebra } \Lambda_I := \mathbb{F}[[I(1)/Z(1)]]$ .

If  $\pi$  is a smooth representation of  $GL_2(F_v)$  over  $\mathbb{F}$  with a central character, then  $\pi^{I(1)} = \pi[\mathfrak{m}_I]$  and  $\pi$  is admissible if and only if  $\dim_{\mathbb{F}} \pi[\mathfrak{m}_I] < \infty$ .

### Theorem 6

Let  $\pi$  be a smooth admissible representation of  $GL_2(F_v)$  over  $\mathbb{F}$  with a central character such that for any  $\chi : I \rightarrow \mathbb{F}^\times$ :

$$[\pi[\mathfrak{m}_I] : \chi] = [\pi[\mathfrak{m}_I^3] : \chi]$$

Then  $\dim_{\mathbb{F}} V(\pi) \leq \dim_{\mathbb{F}} \pi[\mathfrak{m}_I]$ , in particular  $V(\pi)$  is finite dimensional.

# Proof of Theorem 2: Step 2

## Proof of Theorem 6:

## Proof of Theorem 2: Step 2

### Proof of Theorem 6:

The  $\Lambda_I$ -module  $\pi^\vee$  is generated by at most  $r := \dim_{\mathbb{F}} \pi[\mathfrak{m}_I]$  elements.

## Proof of Theorem 2: Step 2

### Proof of Theorem 6:

The  $\Lambda_I$ -module  $\pi^\vee$  is generated by at most  $r := \dim_{\mathbb{F}} \pi[\mathfrak{m}_I]$  elements.

$$\text{For } 0 \leq i \leq f-1 \text{ set } \begin{cases} X_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & [\lambda] \\ 0 & 1 \end{pmatrix} \\ Y_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & 0 \\ p[\lambda] & 1 \end{pmatrix} \end{cases} \in \Lambda_I.$$

## Proof of Theorem 2: Step 2

### Proof of Theorem 6:

The  $\Lambda_I$ -module  $\pi^\vee$  is generated by at most  $r := \dim_{\mathbb{F}} \pi[\mathfrak{m}_I]$  elements.

$$\text{For } 0 \leq i \leq f-1 \text{ set } \begin{cases} X_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & [\lambda] \\ 0 & 1 \end{pmatrix} \\ Y_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & 0 \\ p[\lambda] & 1 \end{pmatrix} \end{cases} \in \Lambda_I.$$

Note that  $\mathbb{F}[[N_0]] \cong \mathbb{F}[[X_0, \dots, X_{f-1}]]$ .

## Proof of Theorem 2: Step 2

### Proof of Theorem 6:

The  $\Lambda_I$ -module  $\pi^\vee$  is generated by at most  $r := \dim_{\mathbb{F}} \pi[\mathfrak{m}_I]$  elements.

$$\text{For } 0 \leq i \leq f-1 \text{ set } \begin{cases} X_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & [\lambda] \\ 0 & 1 \end{pmatrix} \\ Y_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & 0 \\ p[\lambda] & 1 \end{pmatrix} \end{cases} \in \Lambda_I.$$

Note that  $\mathbb{F}[[N_0]] \cong \mathbb{F}[[X_0, \dots, X_{f-1}]]$ .

### Proposition 2

The hyp. on  $\pi$  in Thm. 6 implies that the action of  $\text{gr}_{\mathfrak{m}_I} \Lambda_I$  on  $\text{gr}_{\mathfrak{m}_I} \pi^\vee$  factors through the abelian quotient  $\mathbb{F}[(X_i, Y_i)_i] / (X_i Y_i)$  of  $\text{gr}_{\mathfrak{m}_I} \Lambda_I$ .

# Proof of Theorem 2: Step 2

## Proof of Theorem 6:

The  $\Lambda_I$ -module  $\pi^\vee$  is generated by at most  $r := \dim_{\mathbb{F}} \pi[\mathfrak{m}_I]$  elements.

$$\text{For } 0 \leq i \leq f-1 \text{ set } \begin{cases} X_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & [\lambda] \\ 0 & 1 \end{pmatrix} \\ Y_i := \sum_{\lambda \in \mathbb{F}_{p^f}^\times} \lambda^{-p^i} \begin{pmatrix} 1 & 0 \\ p[\lambda] & 1 \end{pmatrix} \end{cases} \in \Lambda_I.$$

Note that  $\mathbb{F}[[N_0]] \cong \mathbb{F}[[X_0, \dots, X_{f-1}]]$ .

### Proposition 2

The hyp. on  $\pi$  in Thm. 6 implies that the action of  $\text{gr}_{\mathfrak{m}_I} \Lambda_I$  on  $\text{gr}_{\mathfrak{m}_I} \pi^\vee$  factors through the abelian quotient  $\mathbb{F}[(X_i, Y_i)_i] / (X_i Y_i)$  of  $\text{gr}_{\mathfrak{m}_I} \Lambda_I$ .

Hence  $(\text{gr}_{\mathfrak{m}_I} \pi^\vee)[1/\prod X_i]$  is generated by at most  $r$  elements over:

$$(\mathbb{F}[(X_i, Y_i)_i] / (X_i Y_i))[1/\prod X_i] \cong \mathbb{F}[(X_i)_i][1/\prod X_i].$$

## Proof of Theorem 2: Step 2

Endow  $\pi^\vee[1/\prod X_i] \cong \pi^\vee \otimes_{\mathbb{F}[[N_0]]} \mathbb{F}[[N_0]][1/\prod X_i]$  with tensor product filtration for  $\begin{cases} \mathfrak{m}_I\text{-adic filtration on } \pi^\vee \\ (X_0, \dots, X_{f-1})\text{-adic filtration on } \mathbb{F}[[N_0]][1/\prod X_i]. \end{cases}$

## Proof of Theorem 2: Step 2

Endow  $\pi^\vee[1/\prod X_i] \cong \pi^\vee \otimes_{\mathbb{F}[[N_0]]} \mathbb{F}[[N_0]][1/\prod X_i]$  with tensor product filtration for  $\begin{cases} \mathfrak{m}_I\text{-adic filtration on } \pi^\vee \\ (X_0, \dots, X_{f-1})\text{-adic filtration on } \mathbb{F}[[N_0]][1/\prod X_i]. \end{cases}$

Let  $(\pi^\vee[1/\prod X_i])^\wedge :=$  corresponding completion.

## Proof of Theorem 2: Step 2

Endow  $\pi^\vee[1/\prod X_i] \cong \pi^\vee \otimes_{\mathbb{F}[[N_0]]} \mathbb{F}[[N_0]][1/\prod X_i]$  with tensor product filtration for  $\begin{cases} \mathfrak{m}_I\text{-adic filtration on } \pi^\vee \\ (X_0, \dots, X_{f-1})\text{-adic filtration on } \mathbb{F}[[N_0]][1/\prod X_i]. \end{cases}$

Let  $(\pi^\vee[1/\prod X_i])^\wedge :=$  corresponding completion. It is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge$  (look at the graded modules).

## Proof of Theorem 2: Step 2

Endow  $\pi^\vee[1/\prod X_i] \cong \pi^\vee \otimes_{\mathbb{F}[[N_0]]} \mathbb{F}[[N_0]][1/\prod X_i]$  with tensor product filtration for  $\begin{cases} \mathfrak{m}_I\text{-adic filtration on } \pi^\vee \\ (X_0, \dots, X_{f-1})\text{-adic filtration on } \mathbb{F}[[N_0]][1/\prod X_i]. \end{cases}$

Let  $(\pi^\vee[1/\prod X_i])^\wedge :=$  corresponding completion. It is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge$  (look at the graded modules).

Let  $J := \text{Ker}(\mathbb{F}[[N_0]] \xrightarrow{\text{trace}} \mathbb{F}[[X]])$ , hence  $(\pi^\vee[1/\prod X_i])^\wedge/J$  is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge/J \cong \mathbb{F}((X))$ .

## Proof of Theorem 2: Step 2

Endow  $\pi^\vee[1/\prod X_i] \cong \pi^\vee \otimes_{\mathbb{F}[[N_0]]} \mathbb{F}[[N_0]][1/\prod X_i]$  with tensor product filtration for  $\begin{cases} \mathfrak{m}_I\text{-adic filtration on } \pi^\vee \\ (X_0, \dots, X_{f-1})\text{-adic filtration on } \mathbb{F}[[N_0]][1/\prod X_i]. \end{cases}$

Let  $(\pi^\vee[1/\prod X_i])^\wedge :=$  corresponding completion. It is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge$  (look at the graded modules).

Let  $J := \text{Ker}(\mathbb{F}[[N_0]] \xrightarrow{\text{trace}} \mathbb{F}[[X]])$ , hence  $(\pi^\vee[1/\prod X_i])^\wedge/J$  is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge/J \cong \mathbb{F}((X))$ .

For any  $M \subseteq \pi^{N_1}$  such that  $\dim_{\mathbb{F}} M[X] < \infty$ , the morphism:

$$(\pi^{N_1})^\vee \cong \pi^\vee/J \longrightarrow M^\vee[1/X]$$

factors as a surjection  $(\pi^\vee[1/\prod X_i])^\wedge/J \twoheadrightarrow M^\vee[1/X]$ .

## Proof of Theorem 2: Step 2

Endow  $\pi^\vee[1/\prod X_i] \cong \pi^\vee \otimes_{\mathbb{F}[[N_0]]} \mathbb{F}[[N_0]][1/\prod X_i]$  with tensor product filtration for  $\begin{cases} \mathfrak{m}_I\text{-adic filtration on } \pi^\vee \\ (X_0, \dots, X_{f-1})\text{-adic filtration on } \mathbb{F}[[N_0]][1/\prod X_i]. \end{cases}$

Let  $(\pi^\vee[1/\prod X_i])^\wedge :=$  corresponding completion. It is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge$  (look at the graded modules).

Let  $J := \text{Ker}(\mathbb{F}[[N_0]] \xrightarrow{\text{trace}} \mathbb{F}[[X]])$ , hence  $(\pi^\vee[1/\prod X_i])^\wedge / J$  is generated by at most  $r$  elements over  $(\mathbb{F}[[N_0]][1/\prod X_i])^\wedge / J \cong \mathbb{F}((X))$ .

For any  $M \subseteq \pi^{N_1}$  such that  $\dim_{\mathbb{F}} M[X] < \infty$ , the morphism:

$$(\pi^{N_1})^\vee \cong \pi^\vee/J \longrightarrow M^\vee[1/X]$$

factors as a surjection  $(\pi^\vee[1/\prod X_i])^\wedge/J \twoheadrightarrow M^\vee[1/X]$ .

In particular  $\dim_{\mathbb{F}} V(\pi) \leq \dim_{\mathbb{F}((X))} ((\pi^{\vee}[1/\prod X_i])^{\wedge}/J) \leq r$ .  $\square$

## Proof of Theorem 2: Step 2

### Theorem 7 (B.H.H.M.S., spring 2020)

The representation  $S(U^\vee, \mathbb{F})[\mathfrak{m}_{\vec{r}}]$  satisfies the hypothesis of Theorem 6.  
(Only need 10 instead of  $f' = \text{Max}(2f, 10)$  in the bounds on the  $r_i$ .)

## Proof of Theorem 2: Step 2

### Theorem 7 (B.H.H.M.S., spring 2020)

The representation  $S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  satisfies the hypothesis of Theorem 6. (Only need 10 instead of  $f' = \text{Max}(2f, 10)$  in the bounds on the  $r_i$ .)

Thus  $(S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]^\vee [1/\prod X_i])^\wedge / J$  is finite dimensional over  $\mathbb{F}((X))$ .

## Proof of Theorem 2: Step 2

### Theorem 7 (B.H.H.M.S., spring 2020)

The representation  $S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]$  satisfies the hypothesis of Theorem 6. (Only need 10 instead of  $f' = \text{Max}(2f, 10)$  in the bounds on the  $r_i$ .)

Thus  $(S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]^\vee [1/\prod X_i])^\wedge / J$  is finite dimensional over  $\mathbb{F}((X))$ .

### Theorem 8

We have  $\dim_{\mathbb{F}((X))} ((S(U^\vee, \mathbb{F})[\mathfrak{m}_{\bar{r}}]^\vee [1/\prod X_i])^\wedge / J) \leq 2^f d$ .

## Proof of Theorem 2: Step 2
